

## KillDisk Industrial

KillDisk for Industrial Systems is an affordable industrial-grade disk sanitation software solution, supporting parallel erasure of 100+ HDDs/SSDs and hot swap operation to keep sanitization workflow continuous. Designed for Windows and Linux platforms, this software solution is highly customizable for any context, supports U.S. DoD 5220-22M erasure (and 20+ more international standards) and allows for fully automated operation. Customizable erasure reports, printable certificates and labels can also be generated to support the sanitation process and maintain accountability.

**Supports erasing:**

- Hard Disk Drives & Solid State Drives
- SATA/SATA II/SATA III disks (3.5" & 2.5")
- USB flash drives via USB/USB3
- External HDD/SSD disks via eSATA or USB3

- ✓ Automatically erase 100+ disks in parallel
- ✓ Supports 23 international disk sanitizing standards
- ✓ Fully supports automated hot-swap operations
- ✓ Issue certificates, print labels & save XML reports
- ✓ Advanced Graphical User Interface to control the system
- ✓ Batches – operations on group disks in a context of single transaction
- ✓ Layouts – linking controller ports to graphical disks representation
- ✓ System advanced configuration and customization
- ✓ Ability to clone a master disk or image to newly sanitized disks
- ✓ Advanced error handling of damaged disks and HDDs with bad sector
- ✓ Auto-mode - examine/erase/clone newly connected disks automatically

You may erase as many HDDs/SSDs as you need without extra charges. There is no "charge per erase" policy in effect.
